Summary

Software engineer dedicated to scalable architectures, high throughput, and fault-tolerant design, with deep experience in performance tuning, meta-programming, and other optimizations.

Relevant Experience

- **Software Engineer** - *Elspec* [2026]
  - Reengineered Modbus communication in the core C# product, supporting 240 simulated connections at approximately 10% CPU versus 10-15 at CPU saturation previously.
  - Sole developer of an Avalonia application for embedded Linux, building a flexible device-parameter integration layer and introducing the team's first unit and integration tests in CI.
  - Improved waveform processing algorithms and resolved longstanding device-integration failures through physical hardware testing.
- **Open-Source Developer** [2021 - Present]
  - Created and maintain 7 open-source libraries and tools with 65,000+ downloads across NuGet and GitHub.
  - Contributed to public libraries used by millions.
  - Focus on performance optimization, resilience, meta-programming and source generators.
- **Software Support** - *BrightData* [2024]
  - Built a cross-platform load-testing CLI that reduced the time needed to confirm reported performance issues by roughly 60%
  - Provided software-related support to customers using SDKs and proxy services, debugging customer code and collaborating to resolve high-priority issues.
- **Full Stack Engineer (Part-Time, Sole Developer)** - *A.D. Insurance* [2021-2023]
  - Designed and shipped a .NET MAUI app combining 3-4 vehicle databases into one search, enabling insurance quotes from partial plates.
  - Replaced online PDF converters with a local WPF batch app, accelerating document preparation and keeping sensitive customer data on-device.
  - Configured VPN and authentication to allow secure connections for remote work

Education

- **BSc, Business and Computer Science** - *Open University Of Israel* [Graduated 2025]

Skills

- **Programming Languages:** C#, Python, Java, JavaScript, HTML+CSS
- **Frameworks & Libraries:** .NET Core, ASP.NET, Blazor, WPF, XUnit, .NET MAUI, Avalonia
- **Tools:** Git, GitHub, GitLab, Jira, CI/CD (GitHub Actions, GitLab)
- **AI & LLM:** AI-assisted development (Copilot, Warp, Codex, Gemini), prompt engineering.
- **Operating Systems:** Windows, macOS, Linux (including embedded Linux)
- **Languages:** Hebrew (Native/Fluent), English (Native/Fluent), Russian (Conversational speaking)
